PROJECT INITIALIZATION AND PLANNING

Problem Statement Document

1. Project and Team Details

Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Team ID	SWTID-2026-3296
Team Size	4
Team Leader	Kamalesh P R
Team Member	JAYAKUMARAN V M
Team Members	Kannan P; Naresh C

2. Project Overview

ComicCraft is a web-based application that uses AI to generate personalized comic book stories and illustrations from user-provided prompts. The system combines Google Gemini models for story outlines, narration, and dialogues with Stable Diffusion for comic-style illustrations. Users can provide details such as the story prompt, character name, setting, story tone, and art style, then preview the generated comic and export it as a PDF.

3. Define Problem Statement

The problem statement is structured using the Customer Problem Statement format from the provided template.

Problem Statement (PS)	PS-1
I am (Customer)	A non-artist, casual user, or storyteller who wants to create a personalized comic.
I'm trying to	Turn my story idea or prompt into a complete comic with a storyline, character dialogues, illustrations, and a downloadable final output.
But	Creating the story, dialogue, illustrations, panel layout, and final PDF manually requires significant time and creative/technical effort.
Because	The comic creation process normally involves multiple separate activities such as writing, visual creation, panel organization, and document formatting.
Which makes me feel	It is difficult and time-consuming to turn my creative idea into a complete, visually engaging comic without technical or artistic skills.
Desired Outcome	A simple AI-powered web application that converts user prompts and preferences into a cohesive comic with panel-by-panel content, illustrations, preview, and PDF export.

4. Proposed Solution Direction

• Collect the user's story prompt, main character name, setting, story tone, and preferred art style.

• Use Gemini Flash to generate a structured five-panel comic outline.

• Use Gemini Pro to expand the outline into narration and character dialogues.

• Use Stable Diffusion to generate comic-style illustrations for each panel.

• Organize the generated images and story content into a panel-based comic layout.

• Allow users to preview the complete comic through the web interface.

• Export the completed comic as a downloadable PDF.

5. Team

The project team consists of four members. The team leader is Kamalesh P R, with JAYAKUMARAN V M, Kannan P, and Naresh C as team members.
